

StoreSize Enum Rename — Codebase Audit

Mapping: `SMALL` → `TWO_REGISTER` , `MEDIUM` → `THREE_REGISTER` , `LARGE` → `FOUR_REGISTER`

⚠ `MEDIUM` is ALSO a value of the unrelated `Priority` enum. Those occurrences must **NOT** be changed. They are listed separately below under “DO NOT CHANGE”.

1. Prisma schema — enum definition & defaults

File	Line	Current	Change to
prisma/ schema.prisma	37	<code>SMALL</code> (in enum <code>StoreSize</code>)	<code>TWO_REGISTER</code>
prisma/ schema.prisma	38	<code>MEDIUM</code> (in enum <code>StoreSize</code>)	<code>THREE_REGISTER</code>
prisma/ schema.prisma	39	<code>LARGE</code> (in enum <code>StoreSize</code>)	<code>FOUR_REGISTER</code>
prisma/ schema.vercel.prisma	37	<code>SMALL</code> (in enum <code>StoreSize</code>)	<code>TWO_REGISTER</code>
prisma/ schema.vercel.prisma	38	<code>MEDIUM</code> (in enum <code>StoreSize</code>)	<code>THREE_REGISTER</code>
prisma/ schema.vercel.prisma	39	<code>LARGE</code> (in enum <code>StoreSize</code>)	<code>FOUR_REGISTER</code>

Model field type references (`size StoreSize` , `storeSize StoreSize` at `schema.prisma` / `schema.vercel.prisma` lines 105, 137, 163) do **not** need edits — the type name is unchanged, only its member values.

No Prisma migration files exist (`prisma/migrations/` is absent). The DB enum will need an `ALTER TYPE ... RENAME VALUE` migration handled separately.

2. Seed data — scripts/seed.ts

Store size (StoreSize) — lines 92-106

Line	Current	Change to
92	size: 'LARGE'	'FOUR_REGISTER'
93	size: 'MEDIUM'	'THREE_REGISTER'
94	size: 'LARGE'	'FOUR_REGISTER'
95	size: 'MEDIUM'	'THREE_REGISTER'
96	size: 'SMALL'	'TWO_REGISTER'
97	size: 'MEDIUM'	'THREE_REGISTER'
98	size: 'SMALL'	'TWO_REGISTER'
99	size: 'SMALL'	'TWO_REGISTER'
100	size: 'LARGE'	'FOUR_REGISTER'
101	size: 'MEDIUM'	'THREE_REGISTER'
102	size: 'SMALL'	'TWO_REGISTER'
103	size: 'LARGE'	'FOUR_REGISTER'
104	size: 'MEDIUM'	'THREE_REGISTER'
105	size: 'SMALL'	'TWO_REGISTER'
106	size: 'MEDIUM'	'THREE_REGISTER'

Bundle `storeSize` (StoreSize) — lines 190-242

Line	Current	Change to
190	<code>where: { storeSize: 'SMALL' }</code>	<code>'TWO_REGISTER'</code>
192	<code>storeSize: 'SMALL'</code>	<code>'TWO_REGISTER'</code>
214	<code>where: { storeSize: 'MEDIUM' }</code>	<code>'THREE_REGISTER'</code>
216	<code>storeSize: 'MEDIUM'</code>	<code>'THREE_REGISTER'</code>
240	<code>where: { storeSize: 'LARGE' }</code>	<code>'FOUR_REGISTER'</code>
242	<code>storeSize: 'LARGE'</code>	<code>'FOUR_REGISTER'</code>

Request `storeSize` (StoreSize)

Line	Current	Change to
277	<code>storeSize: 'LARGE' as StoreSize</code>	<code>'FOUR_REGISTER'</code>
289	<code>storeSize: 'MEDIUM' as StoreSize</code>	<code>'THREE_REGISTER'</code>
334	<code>storeSize: 'SMALL' as StoreSize</code>	<code>'TWO_REGISTER'</code>

Display text (KnowledgeArticle content) — optional, cosmetic

Line	Note
390	HTML content string uses human labels “Small Store / Medium Store / Large Store” describing register counts. Not an enum value — update wording only if the team wants the copy to match the new naming.

3. Frontend components (app/)

Store size color maps (object keys are enum values)

File	Line	Current	Change to
app/(authenticated)/stores/_components/stores-client.tsx	19	<pre>{ SMALL: '#F59E0B', MEDIUM: '#0067B9', LARGE: '#00B2A9' }</pre>	keys → <pre>{ TWO_REGISTER: ..., THREE_REGISTER: ..., FOUR_REGISTER: ... }</pre>
app/(authenticated)/admin/bundles/_components/bundles-client.tsx	18	<pre>{ SMALL: '#F59E0B', MEDIUM: '#0067B9', LARGE: '#00B2A9' }</pre>	keys → <pre>TWO_REGISTER / THREE_REGISTER / FOUR_REGISTER</pre>

New-store form — `app/(authenticated)/catalog/new-store/_components/new-store-form.tsx`

Line	Current	Change to
53	<code>size: 'MEDIUM' as string (default)</code>	<code>'THREE_REGISTER'</code>
160	<code>size: 'MEDIUM' (reset de- fault)</code>	<code>'THREE_REGISTER'</code>
281	<code><option value="SMALL">Small (Under 3,000 sq ft)</op- tion></code>	value → <code>TWO_REGISTER</code>
282	<code><option value="MEDIUM">Medium (3,000-6,000 sq ft)</op- tion></code>	value → <code>THREE_REGISTER</code>
283	<code><option value="LARGE">Large (Over 6,000 sq ft)</option></code>	value → <code>FOUR_REGISTER</code>
517	<code><option value="SMALL">Small</op- tion></code>	value → <code>TWO_REGISTER</code>
518	<code><option value="MEDIUM">Medium</op- tion></code>	value → <code>THREE_REGISTER</code>
519	<code><option value="LARGE">Large</op- tion></code>	value → <code>FOUR_REGISTER</code>

(Line 190 `priority: 'MEDIUM'` in this file is Priority — see DO NOT CHANGE.)

Admin stores — `app/(authenticated)/admin/stores/_components/admin-stores-client.tsx`

Line	Current	Change to
11	<code>size: 'MEDIUM' (form default)</code>	<code>'THREE_REGISTER'</code>
16	<code>size: 'MEDIUM' (openCreate default)</code>	<code>'THREE_REGISTER'</code>
17	<code>size: s?.size ?? 'MEDIUM' (openEdit fallback)</code>	<code>?? 'THREE_REGISTER'</code>
82	<code><option</code> <code>value="SMALL">Small</option></code> <code><option</code> <code>value="MEDIUM">Medium</option></code> <code><option</code> <code>value="LARGE">Large</option></code>	<code>values → TWO_REGISTER /</code> <code>THREE_REGISTER /</code> <code>FOUR_REGISTER</code>

Display-only text (optional, cosmetic)

File	Line	Note
<code>app/(authenticated)/admin/_components/admin-client.tsx</code>	8	Description string “...for Small, Medium, and Large stores” — cosmetic copy only.
<code>app/(authenticated)/requests/[id]/_components/request-detail-client.tsx</code>	158, 175	Renders <code>{request?.storeSize}</code> / <code>{request?.store?.size}</code> raw — no code change needed; UI will show new values automatically.

4. API routes — no hardcoded enum values

- `app/api/bundles/route.ts` (lines 13-16): reads `storeSize` from query string and passes through — no literal enum values. No change needed (works with new values automatically).
- `app/api/stores/route.ts` , `app/api/requests/route.ts` : pass `size / storeSize` through from the request body — no hardcoded `StoreSize` literals.

DO NOT CHANGE — Priority enum MEDIUM (unrelated)

These are the Priority enum, NOT StoreSize:

- prisma/schema.prisma:50 — MEDIUM in enum Priority
- prisma/schema.prisma:166 — @default(MEDIUM) on priority
- prisma/schema.vercel.prisma:50, 166 — same as above
- scripts/seed.ts:292, 303, 337 — priority: 'MEDIUM' as Priority
- app/(authenticated)/catalog/new-store/_components/new-store-form.tsx:190 — priority: 'MEDIUM'
- app/(authenticated)/catalog/support/_components/support-form.tsx:13, 90 — Priority MEDIUM
- app/(authenticated)/catalog/replacement/_components/replacement-form.tsx:27, 142 — Priority MEDIUM
- app/api/requests/route.ts:101 — requestData?.priority ?? 'MEDIUM'

Summary of files requiring changes (StoreSize only)

1. prisma/schema.prisma — enum values (3)
2. prisma/schema.vercel.prisma — enum values (3)
3. scripts/seed.ts — store sizes, bundle storeSize, request storeSize (24 literals)
4. app/(authenticated)/stores/_components/stores-client.tsx — sizeColors keys
5. app/(authenticated)/admin/bundles/_components/bundles-client.tsx — sizeColors keys
6. app/(authenticated)/catalog/new-store/_components/new-store-form.tsx — defaults + option values
7. app/(authenticated)/admin/stores/_components/admin-stores-client.tsx — defaults + option values

Cosmetic/optional copy: scripts/seed.ts:390 , app/(authenticated)/admin/_components/admin-client.tsx:8 .

Also required outside the repo: a PostgreSQL enum migration (ALTER TYPE "StoreSize" RENAME VALUE ...) since no Prisma migration files exist.
